## Filtering the current product in virtuemart

Posted by rastemserie - 2015/07/23 08:33

---

I have a table with sales information of all ordered products, but i want to place it in the Virtuemart product details showing only its own data. (Data will change if i sellect next product)How do i place a filter to show it?

```
SELECT
  Ol.created_on,
  Ol.order_item_sku,
  P.product_gtin,
  Ol.order_item_name,
  Ol.product_quantity,
  Ol.product_item_price
FROM
  jos_virtuemart_order_items Ol LEFT JOIN jos_virtuemart_products P
    ON Ol.virtuemart_product_id = P.virtuemart_product_id
```

Thanks

Hello,

Do you want to show orders of currently logged user or for specific product?

---

I want show all orders for specific product. So everyone can see prices over time, because prices may change.

---

For example if you want to show orders for product with ID equals to 15, use the following query:

```
SELECT
  Ol.created_on,
  Ol.order_item_sku,
  P.product_gtin,
  Ol.order_item_name,
  Ol.product_quantity,
  Ol.product_item_price
FROM
  jos_virtuemart_order_items Ol LEFT JOIN jos_virtuemart_products P
    ON Ol.virtuemart_product_id = P.virtuemart_product_id
WHERE
  P.virtuemart_product_id = 15
```

---

Thats what i want but not only with one product, with all. If someone click "next", product\_id will change.  
I dont know if there is a variable in virtuemart to place instead of the "15" that represent the actual product in the frontend.

WHERE

P.virtuemart\_product\_id = (For example \$product)

---

If a request variable with product id is available on a page, it is possible to use it in the query. For example if name of request variable is ProductId, query will look like:

```
SELECT
  Ol.created_on,
  Ol.order_item_sku,
  P.product_gtin,
  Ol.order_item_name,
  Ol.product_quantity,
  Ol.product_item_price
FROM
  jos_virtuemart_order_items Ol LEFT JOIN jos_virtuemart_products P
    ON Ol.virtuemart_product_id = P.virtuemart_product_id
WHERE
  P.virtuemart_product_id = {$REQUEST:ProductId}
```

---

It doesnot work like that, but its ok.  
Thanks any way

---

We provided a sample query, just specify correct name of request variable.

---

I understand, but i dont know the name of the variable.  
I will search it.  
Thanks

If you use SEF links on your site, try to temporary disable it. It helps to see what request variables are used on the page.
