
Pre-sale Question - Is it possible to...

Posted by g8282518 - 2015/08/06 14:47

Hi there,

I will be happy to purchase this product immediately if it is confirmed that the below is possible, and if I have assurances that I will have support to set it up (as my technical ability is limited).

I would like to be able to pull in a price of a product into a Joomla 3 module from an existing data table. I know how to set up the module, but not a clue on how to create data table. For example if I had an excel spreadsheet with the following:

BookID1 PriceID1 Â£2.00

BookID1 PriceID2 Â£3.00

BookID1 priceID3 Â£4.00

I would want to be able to insert a code into the html to search for the BookID, PriceID and then return the relevant price.

I hope that makes sense! If this is possible let me know and I'll buy your product.

Thanks :)

Hello,

The extension can show data from databases and CSV files. It is also possible to search by all fields.

Regards,
ARI Soft

This sounds excellent! If I purchase the product and give you access to the back end of my site, would you assist me with setting it up?

If you want to show data from a database or a CSV file, we can help to configure the module.

Regards,
ARI Soft
