only tiny table is working
Posted by bartlaw - 2015/08/28 03:44
_____

I am using the ari data table. I can only get the tiny table to work.

I read this post http://www.ari-soft.com/ARI-Data-Tables/51166-Tables-not-working.html#51166

The tiny table is shown on the first attached jpg. The styling appears to be working, except for the column titles food,auto,household,furniture,kitchen,bath

The second attachment shows the raw results with no styling for all the other tables (html, data, sorter, visualizer, and GChart)

I have tried changing all of the settings in the ari data table module. No matter what, only the tiny table works.

Any help is appreciated.

Note that I assume the result (only tiny table works) would be the same if I was using the ARI smart content. Hopefully it is fixable so I can get smart content too.

Would a joomla debugger show jquery conflict? I have other jquery plugins.

Thanks

Hello,

It can be a javascript conflict with a 3rd party extension. Could you provide a link to a page where the problem occurs so we can investigate the problem?

Regards,
ARI Soft

SOLVED -

I had two constantly running "javascript" programs on the effected webpage. I turned them off on the same page that I had the ARI Data Table Module. The graphics and tables from ARI Data Table.   Apparently only the Tiny Table was working when my other javascript programs were running. Thanks

_____

"Tiny table" doesn't use jQuery.
