
How to recover user profile variables?

Posted by vuck - 2015/09/28 02:40

I have enabled some optional profile fields for the registered users of my website (using the User-Profile plugin), Joomla return these variable

with:\$profile->profile, \$profile->profile, etc

How I can recover these variables in Ari smart data table?

Regards

Roberto

Hello,

If you want to new predefined variables which can be used in SQL query, see "prepareQuery" method in modules/mod_aridatatables/includes/kernel/DataTables/Models/class.DataTablesDataSqlModel.php file.

Hello,

The extension supports ability to use the following predefined variables for currently logged user:

{\${UserId}} - contains ID of currently logged user.

{\${UserName}} - name of currently logged user.

{\${UserLogin}} - login of currently logged user.

{\${UserEmail}} - email of currently logged user.

The variables can be used in the following way:

```
SELECT
```

```
*
```

```
FROM
```

```
#__users
```

```
WHERE
```

```
id = {${UserId}}
```
