## Column default sort order

Posted by MJ\_ITDept - 2015/10/13 19:02

---

I apologize if this is covered somewhere. I can't figure out how to search an individual forum topic...

I am trying to sort my output by name on page load. I see the "Column settings" section and put name (db name) as well as Name (column heading) in the column index box, chose string under "Sorting type" and chose Ascending under "Sorting order".

It still does not sort by default on the page load.

What am I missing?

Thanks,  
Chuck

P.S. I found the "Advanced Search" but did not find an answer to my question.

Hello,

If you use "ARI Data Table" widget ("Choose table type" parameter is set to "ARI Data Table"). Enter a column index in "Choose table type -> ARI Data Table -> Columns settings -> Column index" parameter instead of column name. The first column has 0 index, the second one has 1 index and etc.

Regards,  
ARI Soft

Thanks for your assistance. Clearing my browser cache helped too!

Chuck
