Table width

Posted by Joey - 2015/10/14 05:51

_____

I'm having a problem sizing my table as it does not fit neatly on the screen. I'm on laptop.

If I view it on a mobile device, I can't see the last column. I'm inputting from a CSV file

My table

How can I made my table fit the screen?

_____

Try to add the following code to "CSS Styles" parameter in module settings:

{$id} {table-layout:fixed;width:100% !important;}
{$id} TD {overflow:hidden;word-wrap:break-word;}

_____

An old version of the module is installed on your site. Upgrade it to the latest version.

_____

I know this is an old post, but in case someone else is interested, I solved my 'wide table' issue by placing the module code inside article tags and linking to an external css for the article:

article { width:940px; overflow:scroll; }

It gives me horizontal and vertical scrolls.

_____

Hello,

Add it to "CSS Styles" parameter in module settings.

Regards,
ARI Soft
