
Some columns not showing - missing in table

Posted by cjmico - 2015/10/19 13:12

our csv file has 8 columns but only 7 are showing on the page! I have removed all commas and quotes etc, here is an example of the data

2,Abandonedandbroke,Jennifer,Field Hunter,8:00 AM,Sunday Steeplechase Infield,,
2,Abandonedandbroke,Jennifer,Show Jumper,10:50 AM,Saturday Round 1 Walnut Ring,3:29 PM,Saturday Round 2 Walnut Ring
3,Alice Faye,Stacey,Dressage,1:40 PM,Friday Test Walnut Schooling,11:45 AM,Friday Materiale Covered Arena
4,Alluring Devil,Katherine,Field Hunter,8:00 AM,Sunday Steeplechase Infield,,

(should be a location 2 if there is a time 2)

Here is the link:

http://www.retiredracehorseproject.org/index.php?option=com_content&view=article&id=1124

You can see no location 2 column (column #8) are showing. I have widened the table and it doesnt' make any difference.

Please help, important to get this out!

Hello,

Could you send the CSV file and screenshot(s) of module settings page by email?

Regards,
ARI Soft

Hello,

The problem occurs because two columns have the same name "Day Location". Change name for the second column to "Day Location 2" for example or leave it empty and use "Columns settings -> Alias" parameter to define an alias for the column.

Regards,
ARI Soft

THANK YOU SO MUCH!! That is perfect and fixed. I have it set to show 500 rows with pagination off (same settings as other table which is fine) and it will only show 10 at a time.

Any idea on that?

If you use "ARI Data Table" widget ("Choose table type" parameter is set to "ARI Data Table") and want to show 500 records by default, set "Choose table type -> ARI Data Table -> Choose custom paging mode -> Simple -> Custom pagination" parameter to 10,20,30,50,500 value.

Regards,
ARI Soft

I got that too. I guess it wasn't saving my settings right, but it's all good now. Can close thread!
