
Is there any way to

Posted by Holbroom - 2015/10/30 14:38

I have two ideas in my head that I would like to achieve using Data Tables but am unsure if it's possible....

Using:

Joomla 3

MySQL DB

1) display data newer than 1 day in bold

2) Click a line on data tables, which opens up a page or popup that pulls a table from the database which is equal to the name of the line...

So if the Line value was 8762346234, you could click it and a popup or joomla page would display and would show the database columns of 8762346234, but I want to create lots of joomla pages for each value, I want the page or popup to create itself based on the line value and pull the database table equal to the line value.

hope somebody can help :)

cheers

Or be able to change the SQL query depending on URL would be great, for example

URL

http://websiteaddress/index.php?product_id=

SELECT FROM databasetable;

Hello,

1. The extension doesn't support this ability.

2. It is possible to use request variables in WHERE clause of SQL query. For example if want to use product_id parameter from an URL, query will look like:

```
SELECT
*
FROM
tbl
WHERE
id = {$REQUEST:product_id}
```

It is possible to open a page with secondary table into a lightbox (for example in "ARI Sexy Lightbox" lightbox). You can read about primary and secondary tables here. About integration with "ARI Sexy Lightbox" is here.

Regards,
ARI Soft
