
Row Grouping

Posted by FourMat - 2015/12/03 16:50

Hello, I'm using ARI Datatables 1.13.0, to import and display data stored in a CSV file. I need to group rows in some way based on data in a column. The following link on the Datatables site shows that it is possible with "Advanced Initialisation" https://datatables.net/examples/advanced_init/row_grouping.html

Is there some way to insert advanced initialisation within the Joomla module?

If that is not possible is there any other way to make this happen?

Thanks. Matt

Hello,

Sorry, but the extension doesn't support this ability.

Regards,
ARI Soft
