
Datatable filtering question

Posted by adfend - 2015/12/08 19:03

Hi,

I just purchased the ARI Data Tables module, and it has met every requirement that I was looking for. However, for some added functionality that is mostly cosmetic - I was wondering if you can add a filter to the column (especially for ranges).

My table looks like...

table name: student_rutgers

attributes: name, ruid, gpa, campusPermit, carManufacturer

I want to be able to select from a drop down for instance... Honda, and have only records that match that carManufacturer.

EDIT Also would like to be able to be able to drop down on the gpa column and be able to select ranges (i.e. 2 through 2.5, 2.5 through 3, etc.)

Right now in the SQL query I just have:

```
SELECT *
```

```
FROM student_rutgers
```

Thank you in advance!

-Adam

Hello,

The extension doesn't support ability to create a separate filters for each column, but it supports ability to use request variables in WHERE clause of SELECT SQL query. For example it is possible to create a HTML form outside a table with filter parameters and use them in the query. For example if want to use categoryId request variable in a query, it will look like:

```
SELECT
```

```
id,
```

```
title
```

```
FROM
```

```
table
```

```
WHERE
```

```
cat_id = {$REQUEST:categoryId}
```

Regards,

ARI Soft
