
\$REQUEST for multiple fields

Posted by omerva - 2016/01/06 20:41

I have columns of database table with multiple fields.

When I use {\$ RESTART: program} you can use LIKE% ...% in SQL Query after WHERE?

Thank you and greetings

Hello,

If you mean a request variable ({\$REQUEST:program}), it can be used in SQL query in the following way:

```
SELECT
  col1,
  col2
FROM
  tbl
WHERE
  col1 LIKE CONCAT('%', {$REQUEST:program}, '%')
```

Regards,
ARI Soft
