
Ari Data Table filter Data

Posted by Lipe - 2016/03/02 09:21

Hello

I'm new in the forum and i want to know before i buy Ari Data table is there is any way for ari data table to filter data. What i mean is that if i have for example data from 2 warehouses with one combobox filter the data of the warehouse. Or with one datepicker to filter the data displayed on ari data table from date x to date y
Is this possible with Ari Data Tables?

=====

Hello,

It is possible to enter a search string in a input box. If want to use custom filters, it is possible to create a HTML search form outside the module and use request variables in "WHERE" clause of SQL query (if data is retrieved from a database).

Form is like this
but i don't know where to add "Where" clause

```
function searchSel() {  
    var input=document.getElementById('realtxt').value.toLowerCase();  
    var output=document.getElementById('realitems').options;  
    for(var i=0;i
```

Can i display Views like this?

```
CREATE VIEW dbo.viewH  
AS  
SELECT    dbo.FatureHRel.ArtikujId, dbo.FatureHRel.Sasia, dbo.FatureHRel.skonto, dbo.FatureHRel.cmimi,  
          dbo.FatureH.kod_fature,  
          dbo.FatureH.skonto AS SkontoTotale, dbo.FatureH.shenime, dbo.VIEWArtikujt.Kod,  
          dbo.VIEWArtikujt.Emertim, dbo.VIEWArtikujt.NjesiMatesePershk,  
          dbo.FatureH.data_regj, dbo.VIEWArtikujt.FurnitoriKod, dbo.VIEWArtikujt.FurnitoriEmri,
```

```
dbo.VIEWArtikujt.FurnitoriQyteti, dbo.VIEWArtikujt.FurnitoriAdresa,  
    dbo.FatureH.date_fat  
FROM    dbo.FatureHRel INNER JOIN  
        dbo.FatureH ON dbo.FatureHRel.FatureHId = dbo.FatureH.FatureHId INNER JOIN  
        dbo.VIEWArtikujt ON dbo.FatureHRel.ArtikujId = dbo.VIEWArtikujt.ArtikujId
```

You can create the view in your database (via PHPMYAdmin or other similar tool) and then use "SELECT" SQL query to retrieve data from it (like from table).
