{$Value}
Posted by adoewa - 2016/03/29 10:08

_____

Hi,

I installed ADT on a J3.5 site.

I show images on fields.
On my previous site when a value was emty the result was {$Value}.jpg
I added 1 image wich was the backgroundcolor and named {$Value}.jpg

On the latest ADT version it's only .jpg

Is there a way to show a default value on an empty field?

Greetz, Koen

_____

Hello,

If you mean variables in "Columns settings -> Format" parameter, it is possible to use {$value} variable, not {$Value}.

_____

Hi,

On my old website i used

When there was no value available it gave {$value}.jpg

I made a colored image wich i nemed {$value}.jpg so this image was showed when no data available.

In my new website it shows .jpg

_____

If you want to use some value for example values, use the following code:

{$value|empty:some_value}
