## Different background in fields

Posted by aplauz - 2016/05/01 21:02

---

Hello.  
Is possible to set different background on different fields? Because CSV format don't save information about background colors.

Hello,

If "Advanced styling" parameter is set to "Yes" in module settings, each row will have the following CSS class:

ari-tbl-row-ROWINDEX

and each column:

ari-tbl-col-ROWINDEX

Where ROWINDEX is a zero based row index and COLINDEX is a zero based column index. It will be 0 (ari-tbl-row-0) for the first row, 1 for the second row (ari-tbl-row-1) and etc. It can be used to add custom styles for specific row(s). For example if want to use bold style for all columns in the second row, add the following code to "CSS Styles" parameter in module settings:

```
{ $id } .ari-tbl-row-1 TD {font-weight:bold}
```

If want to use red background for all first column, add the following code to "CSS Styles" parameter:

```
{ $id } TBODY .ari-tbl-col-0 {background-color:red;}
```

Regards,  
ARI Soft

Ok, I can color rows and columns. But fields? Like this:

Color fields

Do you want to use some background color based on value in a column?
