Cannot change charset when connecting to database

Posted by dld - 2016/05/04 07:31

_____

Hello!

I have a weird issue with the ARI Data Tables.
When trying to display special language characters in the ARI tables, it's not shown correctly. (danish characters / hungarian characters etc.)

I read it on the forum that I should change the "Charset name" accordingly, but when I go into my ARI table, to edit it, there's no "Charset name" option.
There are the following options, only:
DB type
Host
DB name
User
Password
Persistance connection

MySQL database, set "Choose source type -> SQL -> External database -> Charset name" is not found.

Is there a way, to get these special characters displayed correctly in the table?

Hello,

Send your order number by email please and specify what DB type you use and collation of your database.

PS: Do you use the latest version of the extension.

Regards,
ARI Soft
