PHP 7 - getting PHP Warning in logs repeatedly
Posted by kdiamond - 2016/05/18 03:44

_____

Hello -   you guys are great - thanks for fixing Ari Docs.

The remaining issue I am seeing is this php warningin the apache logs:

PHP Warning: Declaration of & AriModuleHelper::getModules() should be compatible with &
JModuleHelper::getModules($position) in
/var/www/html/plugins/system/ariajaxdispatcher/ariajaxdispatcher/kernel/Module/j16/class.ModuleHelper.php

and if I disable ajaxdispatcher this seems to start up:

PHP Warning: Declaration of & AriModuleHelper::getModules() should be compatible with &
JModuleHelper::getModules($position) in
/var/www/html/plugins/content/aridatatables/aridatatables/kernel/Module/j16/class.ModuleHelper.php on line 0

Is this something you can knock out?   Every single page load is logging this error.

Thank you-

==

_____

Hello,

Download and upgrade the module and the plugins.

Regards,
ARI Soft

Thank you that worked. I didn't realize it wasn't using the J updater.
