
Align ARI GChart/line chart

Posted by kost36 - 2016/06/02 09:23

Hi there,

3 questions please

How to align:

1. the graph to the center of the page
2. the headers of the table to the right and
3. how to stop display the "0" on the up and left corner of the table

It would be very useful also if it was available a document about how to use parts of the modul e.g. column ID's etc

many thank's

Hello,

Send your order number by email please and could you also send a link to a page with the graph and screenshot(s) of module settings page?

Regards,
ARI Soft

1. Add the following CSS rule to "CSS Styles" parameter in module settings or to a site template CSS file:

```
.adt_gchart>DIV>DIV {margin:0 auto;}
```

2. Add the following cade to "CSS Styles" parameter:

```
TABLE{$id} TH {text-align:right;}
```

3. Set "Columns settings -> ID" parameter to 0 and populate "Columns settings -> Alias" parameter with Â

Hi,
after using your css line
.adt_gchart>DIV>DIV {margin:0 auto;}
take a look (01.png) at where you have to place cursor's point to get the right bullet result.

Also, the `hours` field of mysql query returns result (02.png) formated as 33:32 (33 hours), 32(min), which in graph appears as just 33 (01.png)
thank's

Hello,

1. Could you send the image (01.png) by email?
2. Could you provide a link to a page where the problem occurs?

Regards,
ARI Soft
