## Variable in html caption

Posted by dgomeza - 2016/07/06 06:01
_____

I have three pages in Joomla 3.5.1
1. Events
2. Categories by Event
3. Results

All are linked on the same order.
But on page 2 "Categories by Event" I want put the name of the event in html caption

How could you do that?

Hello,

Do you load the module via plugin (for example "Content - ARI Data Tables" plugin) or directly into a module position?

Regards,
ARI Soft

_____

Load the module via "Module Plant" plugin. It supports ability to override module parameters. For example if want to embed "ARI Data Tables" module with ID = 20 and set table caption to "Categories by Event" value, use the following plugin code:

_____

If I want to use a variable from one row?

For example, I pick one event with name = "Running One by One 5K" from my table Event.

It loads a second page with Categories by Event with the table_caption = "Running One by One 5K - Categories".

Is it possible with "Module Plant"?

Regards,

Daniel
