## Link From Table to Filled-in Form

Posted by wilway - 2016/08/28 09:23

---

Hello -

I added links in a column which go to another page with an update form which is supposed to populate with the record, but the fields are not filling in.

Here is the link from a hand-coded table (not in Joomla) which passes the record to the form successfully:

Hello,

Do you want to pass value of "id" field to update.php script or to article with ID = 59?

Hi -

There is no update.php now - that was before I put the form in a Joomla article.

84 is the category ID for the article.

59 is the article ID.

The \$value reflects the person's last name.

I think recordId must reflect the record number in the ARI Data Table, but in my database I'm using 'id'.

I need for the record from that 'id' to populate the form in the article.

Thank you -  
wilway

Use the following code:

```
{ $value }
```

Check your script in the article. Probably it doesn't work with request variables ("id" request variable in your case).
