Javascript on selection?
Posted by alex32 - 2016/09/03 17:09

_____

Hi

I have a form in my page along with your Data Table, and I want to read the row of the table when I click over to it
I need to read the values in that row via Javascript. I guess I can do it with getElementById, but I'm not sure how to get that element on the page dynamically.
I mean not just looking at the page source , because it's linked to the underlying data and will change every time.

Can you please advise.

Many thanks.

_____

Hello,

Do you use "ARI Data Table" widget ("Choose table type" parameter is set to "ARI Data Table")? Is "Server side pagination" parameter enabled or disabled?

Regards,
ARI Soft

_____

Hi

Thanks for your reply.
The widget is "ARI Data Table" and "Server side pagination" is enabled.

Is it possible to click and get the row of my table with JS?

Many thanks

_____

See "adt_DataTable_DrawCallback" function in
/modules/mod_aridatatables/includes/js/widgets/datatable/js/jquery.dataTables.extra.js file. You can place your code in the function. It is called each time when rows are rendered in a table.

_____

Thank you, I'll look into it this weekend.

Is there a way to edit a row (actually just a cell) of my table and update directly the underlying table in the database?

Many thanks

_____

The extension doesn't support this ability.
