
No Sorting??

Posted by Nicodemus - 2010/07/28 17:11

Hi all. My applications is working perfectly thanks again for the support. But there's something I'm not sure about; :dry: where i can find information about AriData tables? :huh: this is because, i don't know if is possible to configure a column with "No Sorting" just a column... :laugh: in the FAQ inside the module have instructions how to use basically. And within the Zip that i have downloaded with the application, there's not a PDF or something with more information.

;) I hope your answer about the "no sorting" too :3 thanks :P

Hello,

If you mean 'ARI Data Table' widget, it can do all columns sortable or non-sortable. Use for this purpose 'Sorting' parameter. If you want to disable sorting for some columns, 'ARI Table Sorter' widget can be useful for this purpose. Non-sortable columns can be set in 'Columns settings' parameter. Type column index in 'Column index' textbox and choose 'None' in 'Sorting type' drop-down.

Regards,
ARI Soft

Hi :3 thank you very much for the reply... but then, Is not possible use "Ari Data Tables" format and sorting some columns?... necessarily I need use "Ari Data Sort" format for this porpoise? :P

(With Ari Data tables format i mean the same structure, example, the search bar and the bars style... or i need to create a new JQuery theme for my Ari Data Sort?)

Could you specify what format you need and what sorting is required? Do you want to sort some columns by default, have multi-sorting or mean something another?

Regards,
ARI Soft

;) I want to sorting some columns using the "Ari Data Table" widget, not the "Ari Data Sort" one. ^^

I love how "Ari Data Table" widget look in front-end.

Read our previous post, please. 'ARI Data Table' widget doesn't provide possibility to sort only some columns. It can provide sorting possibility for all columns or disable this ability for all columns. We'll think about implementation of partial sorting in a future release.
