## Different message for \"No data available\"

Posted by vladimir84 - 2016/09/24 13:35

---

How can I set a different message for "no data available", or at least to not show anything? I need this because the operator needs to select a date and then they can see many tables on one page. When they first access the page, it is filled with "no data available".

Hello,

The message is located in /modules/mod\_aridatatables/tmpl/genhtmltable.php template file.

Regards,  
ARI Soft
