
using hidden-phone module class suffix

Posted by mikevid - 2016/09/26 15:32

Hi,
I'm using AriData tables. I have two tables. I want one hidden on mobile (small screens). I'm trying to use Module Class Suffix hidden-phone. I've tested other modules on the same page and they hide properly but I can not get this module to hide. Can you assist? I found one post where a person had a similar problem hiding a chart that was resolved, but there isn't a comment on how it was solved.

Hello,

Do you show the module in a module position or load it into a content with help of a plugin?

Regards,
ARI Soft

That explains it. I forgot, yes I'm loading it via a plugin in an article via the main menu. Plugin code: {aridatatables moduleId="450"}

Is there a better way to do it so it can be hidden on phone?

Edit .. I added to the article. That worked. Thank you!

Wrap it with element. It will look like:

```
{aridatatables moduleId="450"}
```
