
CSV Columns

Posted by MarcoX1 - 2016/10/02 11:48

Hello,

sorry for my question! it is possible to only certain columns display? if yes how?

Greetings, Marco

Hello,

Use "Columns settings -> Hidden" parameter to hide a column. Specify column name in "Columns settings -> ID" parameter and set "Columns settings -> Hidden" parameter to "Yes".

Regards,
ARI Soft

Found this helpful, but what happens when there's 60-200 columns showing up that I want to remove or hide? There's nothing in the columns, but it's showing numbers as headers...
I don't know how to remove them in my .csv file.

Thanks,
Julan

Hello,

Try to set "CSV -> Strict mode" parameter in module settings to "Yes".

Regards,
ARI Soft

No luck with the strict mode. http://www.ari-soft.com/images/fbfiles/images/directory_aridatatables.jpg

Could you send the CSV file by email?

Regards,
ARI Soft

Your file contains a lot of empty column. Open it in a text editor and see code like the following one:

.....

Re-save your file without empty columns.
