
Load Data From - SQL

Posted by mike_dcx - 2016/10/14 18:31

Hi Ari Team!!

I want to load data from a SQL DB using FreeTDS Driver. (i hope this is correct)

If i try to make the query directly in my linux server (centos) the query works perfectly .. the odbc.ini have the next data:

```
Driver = FreeTDS
Description = Test
Trace = No
Server = x.x.x.x\SQLTEST
TDS version = 0.95
Database = BD
```

->

In the Load data option (module):

```
From: External database
DB type: ODBC (MS SQL and others)
Host:Driver={SQLServer};Server=x.x.x.x\SQLTEST;Database=BD;
DB name: (empty)
user: user
password: passwd
```

Persistence connection: YES

I'll be try in different ways putting the data in the form, but nothing happend.

Help..!!

Regards!!

Hello,

When "DB Type" parameter is set to "ODBC" value, ODBC driver should be used for a database. ODBC source should be registered on server where your site is installed. You can contact your DB administrator and ask to help configure it for you.

Regards,
ARI Soft
