[SOLVED] Date format, server side pagination
Posted by Krx - 2016/10/18 11:53

_____

Hi

1. How to use format option to format date "2016-10-18 07:28:24" into d.m.Y?

2. When I turn server side pagination on, this query doesn't work:

SELECT
id,
plan_id,
first_name,
last_name,
email,
first_reminder_sent_at,
second_reminder_sent_at,
third_reminder_sent_at,
from_date,
to_date
FROM
#__table_name
ORDER BY id

Module is stuck in Processing...

After investigation I've found that this field causes problem: from_date.
- When I remove from_date from query module works properly.
- Data in to_date field is exact like in from_date, but with 1 year in advance from from_date
- When I turn off server side pagination, module works OK even with from_date field in query.

I need to have server side pagination turned on because table holds approx 5k entries so module fails to load without server side pagination, it shows blank page only.

So how come that from_date doesn't work and to_date works OK?

Any hints?

Thanks,
Regards

_____

Hello,

1. Populate "Columns settings -> ID" parameter with column name and "Columns settings -> Format" parameter with the following value:

{$value|date_format:d.m.Y}

2. Remove ORDER BY from SQL query,

_____

Hi

1. It works, thanks

2. Nope, still doesn't work. I tried it without ORDER as well.

This doesn't work:
...
third_reminder_sent_at,
from_date,
to_date
FROM
...

This works OK:
...
third_reminder_sent_at,
to_date
FROM
...

I wonder if maybe from_date is same like function name or with some regex
rule, and that's why it fails. Other than that I don't have any more clues.
I checked field name from_date million times

As soon as I turn off server pagination, query starts to work with from_date as well..

_____

Use the following query:

...
 third_reminder_sent_at,
 `from_date`,
 to_date
FROM
...

_____

Hi

It works, thanks.
Any hint why it doesn't work without these: ` ?

EDIT:

NWM, I decided to investigate:
http://stackoverflow.com/questions/11321491/when-to-use-single-quotes-double-quotes-and-backticks

Thanks for the support.

Regards

_____

It is not an MySQL issue, this is a limitation of implementation server side pagination in "ARI Data Tables" extension. We will improve it in a future version of the extension.

_____

Hello
I need to locate date format into my language.
I used the code:
set LC_TIME_NAMES = 'cs_CZ';
SELECT tc2, tc5, tc4, DATE_FORMAT(tc1, "%e.%M.%Y") AS datum, id
FROM sbhgl_chronoengine_chronoforms_datatable_treningove_casy
ORDER BY tc1 ASC

when you add set LC_TIME_NAMES = 'cs_CZ';
I'm reports an error: SQLSTATE: General error
please, give me an advice

_____

Hello,

It is not possible to execute several queries. If want to format date using current Joomla! locale, use "date_format" format filter. For example if want to format "datum" column, set "Columns settings -> ID" parameter to datum value and populate "Columns settings -> Format" with the following value:

{$value|date_format:%e.%M.%Y}

_____

Thanks for the advice, but I use ARI Smart Content - GChart
and there Columns settings does not work
It is another solution??

_____

Only possible way is used "date_format" filter. It will not work if "Revert data" parameter is enabled.

_____

Could you provide a link to a page where the chart is used and a temporary access to your J! backend by email so we can check settings?

_____

If a data transformation is used ("Revert data" parameter is enabled or "Graph transformation" is enabled), "Columns settings -> ID" will work with keys from the modified data set. tc1 column doesn't exist in it. In your case date values are used as headers in new data set and it is not possible to change it with help of "Columns settings -> Format" parameter.
