Memory Problem

Posted by Crypt - 2017/01/21 06:07

_____

Hello,

I am having a problem with memory resources when I load the page. I was originally trying to load a CSV file into phpmyadmin with approx 250,000 entries. I was unable to do this and loaded the file in smaller chunks. ARI connects to the database find however the page was returning an out of memory error. I have updated my php.ini to 1024M!! Still no change. I reduced the table to approx 36000 entries - it loads however is extremely slow.

Any suggestions would be fantastic.

Thank you.

_____

Hello,

The extension supports server side pagination for data which is loaded from a database. For this check that "System - ARI AJAX Dispatcher" plugin is installed and enabled, set "Server side pagination" parameter to "Yes" in module settings and set "Choose table type" parameter to "ARI Data Table".

Regards,
ARI Soft
