
Link with space inside...

Posted by adolcini - 2017/01/26 14:55

Hi in my DB Table I have a field used for storing the url for the attachment, most of the url contains space for instance mario rossi CV.pdf

When I set "yes" on Recognize links, Ari Tables recognize the link but till the first spacein this way when I click on the link doesn't work. so I made a query to update the content of information inside the field and I changed all the spaces in the field with '%20'. in this way I don't have any space but the link doesn't work at all...

How can I do to get the attachemt ?

many Thanks

Hello,

If "curricula" column contains only URLs, it is possible to use "Columns settings -> Format" parameter to format it. Set "Columns settings -> ID" parameter to curricula value and populate "Columns settings -> Format" parameter with the following value:

Download

Regards,
ARI Soft
