
responsive table in article

Posted by HeinzP - 2017/01/29 16:01

Hi there,

I've implemented some modules based on one and the only csv data table with individual selections. Works as expected - excellent solution.

View on desktop (or laptop) is fine. With smaller end user devices the tables are not displayed 'responsive' and a horizontal scroll bar does not be displayed as well.

If you would have a look:

<https://www.fgsm.ch/>

It's on the pages Home, Frauenanlässe, Seniorenanlässe, Familientreff and Kurse. Try it with the 'Home' page and resize the screen down to the width of a smartphone - then you will see my issue.

Would be great if you could tell me what I did wrong :-)

Thanks for any hint.

Best regards,

Heinz

Hello,

"ARI Data Tables" is not fully responsive. It can create scrollable tables. For this see "Choose table type -> ARI Data Table -> Scroll width" parameter.

BTW, "Datatable" add-on from ARI Smart Content extension is responsive. You can see it on demo site.

Regards,

ARI Soft

Thank you very much for your prompt reply!

It really seems that the proposed "ARI Smart Content" would cover all my needs the best way.

Best regards

Heinz :)

Are you saying that "ARI Smart Content" would do all the things that "ARI Data Tables" does, but that "ARI Smart Content" is responsive?

Or are you saying that "ARI Smart Content" is an add-on of "ARI Data Tables"?

And if you have to use both of them together, how would you do that in order to make the ARI Data Tables more responsive?

"ARI Smart Content" extension contains a lot of add-ons for different purposes. One of them is "ARI Smart Content - Data Table". It supports all functionality of "ARI Data Tables" extension plus supports extra features. "ARI Smart Content - Data Table" can create a responsive table.
