
URL Format Not functioning after upgrade

Posted by seanknighton - 2017/02/09 04:32

I have been using this line of code in the "format" field for a few years:

View

I just upgraded to php 5.6 with Joomla 3.6.5 and aridatatables 1.15.13

It now breaks the website. If I delete this link the site works. I can not seem to figure out which part of the link it doesn't like. I have tried turning on and off the recognize link option without any luck.

Any ideas???

Hello,

Could you provide a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

Regards,
ARI Soft
