
Pagination(not server side)no show at one site?

Posted by treb - 2017/04/12 09:50

Hello, I have used ARI Data Tables many times, a new use at <http://greatwesternmorris.org.uk/search-videos> shows the result but no pagination or search etc, search most important. - only the first video, and others from the local server, works but that is my problem to solve!

Pagination, search, work at another site, same host, same version of PHP etc 7.0.17 both Joomla 3.6.5, other site using ARI Data Tables v. 1.15.13 OK

I just upgraded <http://greatwesternmorris.org.uk> to ARI Data Tables v. 1.15.14, and plugins up to date - not fixed. I tried switching off loading of MooTools, JQuery, no better?

I also tried same MySQL query via ARI Smart Data Tables, no better.

Thanks

Treb

Hello,

This problem with "stickypanel" plugin. A javascript error occurs in the code which is added by the plugin and it prevents execution of other extensions.

Regards,

ARI Soft

Yes, stickypanel plugin disabled, OK now!

Thanks
