## Apply filter - how to?

Posted by gdsd - 2017/05/31 11:10

---

I am using "ARI Data Tables" and it is working quite well.

Now I'd like to use a filter on a CSV file.

As far as I understand it, a filter means, that only the data is displayed which meets a specific criteria.

In my case I want only the datasets displayed, where in one column it says "OK". (This column is hidden as per the settings of the module btw.)

However in the config of the module I am not sure what "Column Name" means. The title (heading in first row) of the column does not work. The rest of the module settings are dealing with "Column Index" and "ID", which is the number of the column starting with 0.

So what does "Column Name" under "Filters" mean and what do I put there?

Hello,

Specify column name which is used in CSV file (see columns in the first row). For example if want to show records where "Status" column equals to OK, populate "CSV -> Filters -> Column name" parameter with Status value, set "Operator" parameter to "Equal" and enter OK value in "CSV -> Filters -> Value" parameter.

Regards,  
ARI Soft

Thanks for the quick reply, thats what I am trying to do but the filter seems to be ignored.

Module settings:

[http://gdsd.bplaced.net/temp/2017-05-31\\_scrn01.jpg](http://gdsd.bplaced.net/temp/2017-05-31_scrn01.jpg)

CSV File:

[http://gdsd.bplaced.net/temp/2017-05-31\\_scrn02.jpg](http://gdsd.bplaced.net/temp/2017-05-31_scrn02.jpg)

Table as displayed on my website:

[http://gdsd.bplaced.net/temp/2017-05-31\\_scrn03.jpg](http://gdsd.bplaced.net/temp/2017-05-31_scrn03.jpg)

The website:

<http://www.drautalgolf.at/greenfeekooperation>

Note: I have disabled the Joomla cache for the time being and cleared it.

Thanks for your replies, I received the e-mails.

Since according to your e-mails, the "filter-functions" should work with my CSV, I will do some tests, perhaps I can find out more.

Otherwise I will come back to you regarding access to the Joomla backend (via e-mail).

Reporting back: I have found the culprit.

My CSV file uses ISO-8859-1 encoding. Therefore I have set this option in the module settings, so that the data is displayed correctly.

However: This also means that the filters do not work. When I leave the field "File encoding" empty, the filters do apply, but now of course some letters are not displayed correctly and replaced with a "?" symbol.

Is there a way to solve this? (Other than perhaps converting the file to UTF-8 manually before I upload it, which would be a bit inconvenient since I edit the file regularly.)

As a filter I am using Column Name "Status" and Value "OK"

Hello,

are there any news regarding this problem?

I just installed new version 1.16.2

The filter now works with my "ISO-8859-1" CSV-file.

Thanks!
