## Table Links Do Not Work After Joomla 3.7.2 Update

Posted by kefford - 2017/06/16 20:45

---

Hi,

I have cloned my Joomla 3.6.4 site in order to test upgrading to Joomla 3.7.2.

On first look everything seems ok. However, on digging deeper I am finding the LINKs in all ARI DataTables modules no longer work.

All links result in the following error,

Error: 404-Category not Found

I am running the latest 1.16.1 version of ARI DataTables. Has this version been tested and found compatible with Joomla 3.7.2?

Any ideas or suggestions are welcome. Thanks.

Ken

Hello,

What links do you mean? Do you use "Columns settings -> Format" parameter to create links or the module shows links from a database or CSV file? It is possible to see the problem anywhere?

Regards,  
ARI Soft

Sorry, yes the "Columns" and "Format" links, an example is below,

{ \$value }

Thanks.

And to see the problem, just go here,

<https://sim-x.net/test/index.php/simsearch/demo-search>

This is on my test site and is running Joomla 3.7.2

To test a link just pick settings as follows,

Location Country = Canada  
Aircraft Family = A320

---

Qualification Level = Level D

Then hit SEARCH to return results. The links are in the first column. Just pick any of the links and the ERROR is seen.

This works flawlessly under Joomla 3.6.4

Thanks.

Try the following code:

```
{ $value }
```

Thank you, that works. Just missing the slash "/" before the URL code. I guess Joomla 3.7.2 is more restrictive!

I actually updated all the ARI modules to add the slash "/" on my current live site running 3.6.4 before updating to 3.7.2.
