Blank page

Posted by jenaplisken - 2017/07/04 06:33

_____

I'm using Ari Data Table to visualize (table type:ari data tables) a csv extracted directly from a google sheet (the file is about 49k). When the table is about of 100 lines the page load is very slow. Over the 100 lines the page not load, only blank page.
I try with different setting but nothing.

_____

Hello,

It is not possible to show data from CSV file which contains a lot of records because PHP memory limit is exhausted. It is possible to use server side pagination and show a large data from a database (for example from MySQL database).

Regards,
ARI Soft
