## Putting test before the table

Posted by peppermintpatte - 2017/07/22 16:27

---

I have a database of songs, with some info and links. I have a Menu Item 'Alpha Listing.'

I want to put the following text at the top of the page before the database Grid :

'This is a complete listing of all the songs on this site. Please click the arrow to the right of the title to sort by that field'

I can't find a way to put text at the top of the page. Can this be done?

Hello,

"ARI Data Tables" module can be loaded into an article (use "Content - ARI Data Tables" plugin or "Content - Load Module" standard Joomla! plugin) and a text can placed into the article.

Regards,  
ARI Soft
