
Server side script

Posted by willanga - 2017/07/27 09:44

Hi,
Is it possible for ARI Datatables to fetch data from a database using serverside scripting? I have a database with hundreds of thousands of entries and would love to use this extension, however, the loading is very slow.

Thanks

=====

Hello,

It is possible if "ARI Data Table" widget is used ("Choose table parameter" is set to "ARI Data Table" value). Set "Server side pagination" parameter to "Yes" in module settings.

Regards,
ARI Soft
