
Text/Font size

Posted by peppermintpatte - 2017/09/03 14:07

We have created a song list at <http://trax-n-tabs.com/index.php/mathieu-s-trax/mathieu-s-song-list>

We have used the Smoothness theme which makes the text more readable. But is there a way to change either the Caption text or the Table data text separately? We would like the Caption text above the table to be a bit bigger. Is there a way to do this?

Hello,

Add the following CSS rule to "CSS Styles" parameter in module settings to increase caption font size:

TABLE.dataTable CAPTION {font-size: 25px}

Great! Thank you very much.

How would I do something similar for the table data? We have another site with a similar problem :
<http://networkingtechnology.org/pan-an/index.php/song-list>

I have used the same theme but it's an older version of Joomla. It seems that when I have the Ari Data Table option available it sort of uses the theme but if the Ari Data Sorter option is available/visible the table view on the website changes to the default/no theme. Even so, when the theme is used the text is a bit too small for some of our visitors. How can I enlarge the table data text?

Could you send a screenshot where we can see the problem?

Regards,
ARI Soft

The problem is with HKT Music (HKT_DB.jpg).

In comparison to Trax N Tabs, the table data text on HKT is smaller. Theoretically, the only difference is the Joomla version but, as I said, some of our visitors find the table difficult to read. <http://www.ari-soft.com/images/fbfiles/files/DB.zip>

This conflict with site template styles. Add the following CSS rule to change font size for table elements:

```
TABLE.dataTable *,  
TABLE.dataTable A,  
TABLE.dataTable A:link,  
TABLE.dataTable A:hover {font-size: 16px}
```

Regards,
ARI Soft
