
Customizing ARI Databases initialisation options

Posted by HILLEN - 2017/11/13 14:34

Hi,

I want to integrate a Dutch language file (Javascript).
Where can I find the location to load or edit it in ?
Where and how to install plugins?

Regards,

Ben

Hello,

See /language/en-GB/en-GB.mod_aridatatables.sys.ini language file.

Regards,
ARI Soft

Hi,

Thanks. Do I need to edit that file?

However, I found the configuration file below. Is is also possible to import this file as an initialisation option?

Regards,

Ben

```
1 /**
2  * Dutch translation
3  * @name Dutch
4  * @anchor Dutch
5  * @author Erwin Kerk and ashwin
6  */
7
8 {
9   "sProcessing": "Bezig...",
10  "sLengthMenu": "_MENU_ resultaten weergeven",
11  "sZeroRecords": "Geen resultaten gevonden",
12  "sInfo": "_START_ tot _END_ van _TOTAL_ resultaten",
13  "sInfoEmpty": "Geen resultaten om weer te geven",
14  "sInfoFiltered": " (gefilterd uit _MAX_ resultaten)",
15  "sInfoPostFix": "",
16  "sSearch": "Zoeken:",
17  "sEmptyTable": "Geen resultaten aanwezig in de tabel",
18  "sInfoThousands": ".",
19  "sLoadingRecords": "Een moment geduld aub - bezig met laden...",
20  "oPaginate": {
21    "sFirst": "Eerste",
22    "sLast": "Laatste",
```

```
23     "sNext": "Volgende",
24     "sPrevious": "Vorige"
25 },
26 "oAria": {
27     "sSortAscending": ": activeer om kolom oplopend te sorteren",
28     "sSortDescending": ": activeer om kolom aflopend te sorteren"
29 }
30 }
```

The language file which we specified is used for English language (and as default translation). You can create /language/nl-NL/nl-NL.mod_aridatatables.sys.ini file and translate necessary strings. The extension doesn't support ability to use translation from javascript files.
