Server Side CSS

Posted by trevor_stp - 2018/03/07 14:19

_____

Hi,

I've enabled server side pagination and some of my 'CSS Styles' no longer appear:

TABLE{$id} TR TD.ari-tbl-col-9 DIV
{
color: #04b404;
font-weight: bold;
}

etc..

Also, 'Fixed Column' removes style from the sortable column headed, and the rows are no longer aligned (see bottom scroll bar offset)

I've emailed front end/back end login details as well as link. Thank you.

_____

Hello,

It looks like a problem with template styles. For example the following CSS rule from templates/rt_zephyr/css/joomla.css file remove header styles in the tables:

#rt-mainbody .component-content th {
    background: none;
}

Regards,
ARI Soft

_____

thanks, the header is now fixed. Any idea why the inline stying is stripped when Server Side pagination is enabled? "Css style works fine when server side is not set to yes.

_____

CSS style will work with Server side Pagination by using Column Settings-> Format as opposed to "CSS Styles"

Thanks
