
pass data from ari data tables to another

Posted by medeino - 2018/04/11 06:21

Hi,

as you have explained in a very good way I've used Format field in Column settings to link to another page passing a parameter,too, in this way:

{ \$value }

now I would like to use the \$value in a query of the PAGE_TO_LINK (ari data table page):

in which way could I do?

Thanks a lot for your help

Hello,

Could you describe in more details what you want to achieve?

Regards,
ARI Soft

Absolutely

I have two ari data tables

In the first i choose a Field That is the key of the second data table, during the link I pass the Field in this way:

{ \$value }

After That i want to use the \$value to select records from second data table i this way, select a from table b where key= \$value

I dont know what to do

The parameter can be added to the link as GET variable. It will look like:

{ \$value }

and then use { \$REQUEST:some_key } predefined variable in WHERE clause of SQL query in the second table. For example:

```
SELECT
id,
title
```

```
FROM
  some_table
WHERE
  id = {$REQUEST:some_key|empty:"}"
```

Great!

It works perfectly!

Thank you so much for your help, you're very very professional

I'm really sorry to bother you again,
but I've a little problem that I can't solve by myself:

following your precise instruction I've built this query in ari data tables:

```
select
denominazione,
cod_fiscale,
num_avviso,
importo
from
cb6crm_contribuenti
where
denominazione like '{$REQUEST:sSearch}%'
```

but it doesn't work

what do I wrong?

thanks a lot for your attention and your help :(:(:(

I try to explain in a better way:

I've build a serch page following your indications and it works well.
Unfortunately teh search works in a table with 200.000 records and to load everything is very hard.

So that I've passed a parameter to search to ari data table changing the query from this

```
select
denominazione,
cod_fiscale,
num_avviso,
```

```
importo
from
cb6crm_contribuenti
where
denominazione ={$REQUEST:sSearch|empty:"}"
```

to that:

```
select
denominazione,
cod_fiscale,
num_avviso,
importo
from
cb6crm_contribuenti
where
denominazione like {$REQUEST:sSearch%|empty:"}"
```

but I probably make a mistake with the syntax: Could you please help me?

I found the solution by myself

```
select
denominazione,
cod_fiscale,
num_avviso,
importo
from
cb6crm_contribuenti
where
denominazione like concat ({$REQUEST:sSearch}, '%')
```

Now it works perfectly
