## pass TWO data from ari data tables page

Posted by medeino - 2018/04/18 18:14

---

Hi,

how to add another field to pass to this in ari data tables column settings?

{ \$value }

I would like to pass another field of the table:

in which way could I do?

Thanks a lot for your help

hallo,

I try to put two variables in this way:

{ \$value }

I see the value of cf\_id variable,

but not the value of num\_avviso variable

What do I make wrong?

Hello,

Use { \$columns: COLUMN\_ID } predefined variables. For example { \$columns: cf\_id } variable for cf\_id column.

Regards,  
ARI Soft
