## [Solved]Not working - printing module string as-is

Posted by Bhaskar123 - 2018/04/24 16:13

---

It prints the following.

```
{aridatatables moduleId="97"}{/aridatatables}
```

Joomla! 3.8.7 Stable

AriDataTables 1.16.4

Another Joomla installation on the same server works OK.

BTW, when I use the "preview" button, it gives a blank page and the posting gets lost.

Hello,

Could you provide a link to a page where the problem occurs and a temporary access to your J! backend by email so we can investigate the problem?

Regards,  
ARI Soft

Turned out that the plugin was not turned on. Once all 3 - package, module, and plugin were turned on, it started working.
