
Simple time chart

Posted by logi_cat - 2018/05/04 11:50

We need to create a simple time chart with a datetime in X-Axis and a value in a Y-Axis. The data is obtained from a Joomla table with a SQL instruction: 'SELECT date, value from lecturas'. In the chart we view the date values in the legend only and not in the X-Axis. How can we do that?

Thanks.

Hello,

Could you send an SQL dump with sample data by email and an image with a sample chart?
