
ARI Data Table Theme

Posted by atticus - 2010/08/16 23:05

Hello, where can I find the table theme as seen on the demo page

Thanks for your help.

Hello,

jQuery UI themes can be used with 'ARI Data Table' widget. For this set 'Using jQuery UI themes' parameter of the widget to 'Yes' and choose appropriate theme in 'Using jQuery UI themes' drop-down.

Regards,
ARI Soft

Thank you, that works. :)

Is it possible to add my own theme to this list. I would like to change the background color of the cells (remove the zebra theme and use my own table background)

Thanks.

You can read how to add new theme in module settings page. See 'How to create and add new jQuery UI theme?' section in 'Description' field, please.

can you point me in the direction as to where to find the page; is it located on your site?

No, open module settings page on Joomla! backend. It contains the following text:

Open ThemeRoller application, create your own theme, configure and download it. After this open /modules/mod_aridatatables/includes/assets/jui/ folder on your server, create new folder for your new theme and copy file from 'css/custom-theme/' folder from ThemeRoller archive. At the end rename CSS file to styles.css. That's all.

Re:ARI Data Table Theme

Posted by atticus - 2010/08/17 17:21

Hello Again,
I purchased the ARI Smart Content which came with ARI JQuery UI Loader and it does not have a description as the other plugin does.

Name: ARI JQuery UI Loader
Enabled:
Type: system
Description: System plugin for loading UI jQuery library.

Is there something else to purchase?

Thanks.

Sorry, but your question about 'ARI Smart Content' or 'ARI Data Tables' extension? These are two different extensions.

OK, yes I see what you mean.
Your answers were still very helpful.

Thanks

Hello,
I created my theme with <http://jqueryui.com/themeroller>, but I can't figure out how to install it into ARI Smart Content plugins. Please help.

Thank you

Hello,

Create new folder for your theme by the next path:

`/plugins/content/arismartcontent/system/ari_jquery_ui_loader4c70d0ef9d860/js/1.7.2/themes/`

For example, if folder 'mytheme' is created, rename CSS file to mytheme.all.css and copy new theme files to new folder.

Regards,
ARI Soft
