
Ari Data Tables not working with Joomla v3.8.10??

Posted by twarfield - 2018/10/10 16:31

Fresh Joomla install (v3.8.10), fresh Ari Data Tables module install, getting errors:

Extensions/Modules/New, Module Type = "Ari Data Tables", gives this:
http://www.warfieldconsulting.com/for_arisoft/screenshot1.png

From there, put something in the "Title" box and press save; that gives this:
http://www.warfieldconsulting.com/for_arisoft/screenshot2.png

Any hope?

Thanks

Hello,

Check that you use the latest version of the extension (1.16.4) and "System - ARI Extensions" plugin is installed.

Regards,
ARI Soft

Thank you; I didn't realize there was a newer version. Working now.
