
\ "Debug Mode\" does not work

Posted by vuck - 2018/11/02 22:47

Regards

I use ARI Data Table version 1.16.4 in Joomla 3.9. When active, "Debug Mode" does not display the SQL statement on the screen. How can i fix this? I need to visualize the SQL statements that I am executing. thanks for your help

Hello,

Do you connect to Joomla! database or to an external database?

I just realized that it only works with external databases, because it does not work with Joomla databases?

Regards,
Roberto

The extension uses Joomla! API to enable debug mode when connects to Joomla! database. Check that debug mode is enabled in Joomla!
