## ARI Data Tables Responsive for Mobile view?
Posted by rusasadmins - 2018/12/19 18:07
_____

It seems like the ARI Data Tables do not convert to a responsive view.

page: https://genetics.rutgers.edu/research/grants

When you view as responsive
- the table does not stack
- the table goes 'off the page'

What can be done to make these tables responsive / useable on a cell phone?

Here is an example of what we did with 'regular html tables' to make them 'responsive'
https://www.sas.rutgers.edu/cms/deptdemo/about-us/sample-table

Any ideas?

Thanks!

Hello,

Sorry, but "ARI Data Tables" doesn't support responsive mode. It is supported by DataTable add-on from "ARI Smart Content" package.

Regards,
ARI Soft

_____

But when I go to the link: http://smart.ari-soft.com/joomla-datatable.html

This example the table at least 'condenses' for a mobile format.  Where the version that is displayed on my site, does not even 'attempt' to condense.

_____

The extension adds collapse/expand buttons (+/-) to show some columns when they doesn't fit screen size. See the screenshot below:

_____

I am fine with this option.  What do I need to install in order for the collapse/expand to work?

Our page can be found here:
https://genetics.rutgers.edu/research/grants

thanks.

_____

Hello,

It seems you use "ARI Data Tables" module, not "ARI Smart Content".

Regards,
ARI Soft

_____

I wasn't aware that when we purchased 'smart tables' that it wouldn't include all that is needd to run 'data tables'.  Are you saying that we needed to purchase:

1. smart content: $29
2. Then purchase data tables?

Please explain, so we can make sure we get the approval to purchase the additional product.

thanks,
Laura

_____

It requires only "ARI Smart Content". "ARI Smart Content" contains DataTable add-on.

Regards,
ARI Soft
