
Data Table Does Not Load Anymore

Posted by dee342 - 2019/02/01 02:45

I recently installed Ari Smart Content and just noticed that my table does not load anymore. I've had a problem getting Smart Content to work and was going to uninstall it. Can someone tell me what to do to get the table to load again? I can see the loader but no data is loading and the only thing that I changed was to add the Smart Content. Do I need to go ahead and uninstall Smart Content to get the table to work again? The table is more important. Thanks.

Hello,

The page contains a broken javascript inline code which is added via Joomla! API and as result extensions don't work. It seems the problem occurs by extension which adds code for Google Ads.

Regards,
ARI Soft
