
Retored site and now Column formatting is not work

Posted by MJ_ITDept - 2019/02/01 15:04

Hello again. I am still working on my restored sandbox site and have run into another issue with it. The column widths and formatting are not working. I have made sure to disable the "Advanced Module Manager" when working on these modules. Thanks for that tip before! :)

On the old site under the Column Settings section, I had the column Align and column Width set the same as the restored sandbox site I am working on. The only difference between the two sites is the PHP version went from 5.6 to 7.2. On the restored site those 2 settings are NOT being recognized. I saw another posting about using the Format column to paste in CSS which I did. That worked, but things are not showing like the original site. I don't know how to make everything aligned to the center that way though. I'm not sure why those 2 settings are no longer working.

You should still have credentials for the site: <http://67.43.1.161/~sandboxmj/administrator/index.php?mjadmin>

Thanks for your assistance again,
Chuck

I was able to work my way around those two issues. However, it is not recognizing the link in one of my columns and that is VERY important.

It seems a lot of the functionality is no longer working with PHP 7.2... At least not as easily as before.

Thanks,
Chuck

OK, I got the link to show now as well. I seem to have better luck searching these forums with Google than the search box on here for some reason...

Anyway, now I have the link info on there twice. Once as a link and once not as a link... Any ideas on how to clear the original non-linking data?

Thanks yet again!
Chuck

Hello,

Could you provide a link to a page where possible to see the problems? You can send it by email.

Regards,
ARI Soft
