How to insert code

_____

Hello,
I need to set the sorting by price on the following pages ..

http://www.biggest.cz/index.php/cs/prodej2/stavebni-stroje?view=category&layout=category

and I do not know how to insert a code module into your pages. In programming, unfortunately I am not too strong.
Can I ask for advice please?
Thank you for your reply.
Martin

Re:How to insert code

_____

Hello,

If you want to embed the module into an article use 'Content - ARI Data Tables' plugin which comes with extension package. Install and enable plugin. After this type the following code in an article:

{aridatatables moduleId="MODULE_ID"}{/aridatatables}

Where MODULE_ID is necessary module id. For example if 'ARI Data Tables' module has ID = 19, use the next code:

{aridatatables moduleId="19"}{/aridatatables}

Regards,
ARI Soft

Re:How to insert code

_____

Thanks for the quick reply.
In your package "arismartcontent". I just plug JDataTable. Can I use this?
Advertisements for the above link use components Yoo - the zoo, so I'll probably have to code for sorting tables add to the PHP file. The procedure is what please?

_____

If you want to wrap HTML table which is generated with help this PHP code, wrap it with {arijdatatable} tag. In other word, code will look like:

... some PHP code ...
{arijdatatable}

... some PHP code ...

{/arijdatatable}
... some PHP code ...

If you use this code not in Joomla! article, use 'System - ARI Smart Content' plugin instead of 'ARI Content Content' plugin. 'System - ARI Smart Content' can be downloaded here on F.A.Q. tab.

Regards,
ARI Soft
